

Mipa Spot Sealer Spray

Mipa Spot Sealer Spray has been especially developed for small sanded-through areas in spot repairs. The low-build, glazing application and very smooth flow does not require any further intermediate sanding.

Mipa Spot-Sealer-Spray can be overcoated directly wet-on-wet with basecoats and provides very high corrosion protection despite low dry film thickness.

- Very smooth flow and low overspray
- High corrosion protection despite low dry film thickness
- Excellent adhesion on iron, steel, zinc and aluminium
