Special Spray Guns for Primer Materials

Prep materials such as primer, filler and spray putty fulfill an important function within the paint process. To economically apply these primer materials, the use of the SATAjet 100 B F and B P are recommended. The material is applied with extremely low overspray allowing little masking efforts**.**

SATAjet® 100 B F™

RP® and HVLP – for primer and filler application

Primer and filler application with little overspray saves paint material and reduces masking effort. A smooth material distribution reduces subsequent sanding efforts. Already with an inlet pressure of 0.5 bar, the spray fan can be flexibly and precisely adjusted even to small spot repair areas.

- Sturdy spray gun with anodised spray gun body
- Fully equipped with round/flat fan control and material flow control as well as air micrometer
- Comfortably lightweight and ergonomically optimised spray gun
- Little cleaning and maintenance
- Versatile use due to each four different RP and HVLP nozzle sizes

SATAjet® 100 B P™

For spray putty application

The nozzle set "P" creates high film builds. The sharp-edged spray fan allows precise spray putty application.
